Performance Evaluation 25 (1996) 317–318

PERFORMANCE EVALUATION
An International Journal

Author Index Volume 25

(The issue number is given in front of the page numbers)

Awater, G.A. and **H.A.B. van de Vlag,** Exact computation of time and call blocking probabilities in large, multi-traffic, multi-resource loss systems (1) 41– 58

Bouras, C.J. and **P.G. Spirakis,** Performance modeling of distributed timestamp ordering: Perfect and imperfect clocks (2) 105–130
Brassil, J. and **R. Cruz,** Nonuniform traffic in the Manhattan street network (3) 233–242
Bruneel, H. and **B. Steyaert,** Storage requirements in ATM switching elements with correlated arrivals and independent uniform routing (3) 193–209

Chang, C.-J. and **L.-C. Hwang,** Analysis of a general service nonexhaustive polling system using a heuristic combination method and pseudoconservation law (3) 173–191
Chlamtac, I., A. Ganz and **M.G. Kienzle,** A performance model of a connection-oriented hypercube interconnection system (2) 151–167
Choudhury, G.L. and **W. Whitt,** Computing distributions and moments in polling models by numerical transform inversion (4) 267–292
Cruz, R., *see* **Brassil, J.** (3) 233–242

Ganz, A., *see* **Chlamtac, I.** (2) 151–167

Haverkort, B.R. and **I.G. Niemegeers,** Performability modelling tools and techniques (1) 17– 40
Hwang, L.-C., *see* **Chang, C.-J.** (3) 173–191

Kienzle, M.G., *see* **Chlamtac, I.** (2) 151–167
Kim, D.S. and **C.K. Un,** Performance of contention processing schemes for WDM networks with control channels (2) 85–104

Lee, T.T., *see* **Liew, S.C.** (4) 247–266
Liew, S.C. and **T.T. Lee,** SKEL: A fundamental property desirable in ATM switches for simple traffic management – illustrations with generic output-buffered and input-buffered switches (4) 247–266

Magazine, M.J. and **K.E. Stecke,** Throughput for production lines with serial work stations and parallel service facilities (3) 211–232
Meempat, G., G. Ramamurthy and **B. Sengupta,** A new performance measure for statistical multiplexing: perspective of the individual user (1) 59– 80
Morrison, J.A., Blocking probabilities for multiple class batched Poisson arrivals to a shared resource (2) 131–150

Niemegeers, I.G., *see* **Haverkort, B.R.** (1) 17– 40

Ramamurthy, G., *see* **Meempat, G.** (1) 59– 80

Sengupta, B., *see* **Meempat, G.** (1) 59– 80
Spirakis, P.G., *see* **Bouras, C.J.** (2) 105–130
Stavrakakis, I., *see* **Tsakiridou, S.** (1) 1– 15
Stecke, K.E., *see* **Magazine, M.J.** (3) 211–232
Steyaert, B., *see* **Bruneel, H.** (3) 193–209

Tsakiridou, S. and **I. Stavrakakis,** Mean delay analysis of a statistical multiplexer with batch arrival processes—a generalization to Viterbi's formula (1) 1– 15

Un, C.K., *see* **Kim, D.S.** (2) 85–104
Un, C.K., *see* **Youn, Y.S.** (4) 293–311

van de Vlag, H.A.B., *see* **Awater, G.A.** (1) 41– 58

Whitt, W., *see* **Choudhury, G.L.** (4) 267–292

Youn, Y.S. and **C.K. Un**, Performance analysis of cut-through buffered banyan networks with finite buffer size (4) 293–311

Subject Index to Volume 25

ATM 193
ATM switch 293
ATM switches 247

Batched arrivals 131
Blocking probabilities 41, 131
Boundary probabilities 193
BPP arrival process 41
Broadband networks 233
Buffer allocation 211
Buffer overflow 59
Buffered banyan network 293

Call congestion 41
Clock drifts 105
Closed-queueing model 85
Concurrency control 105
Conflicts 105
Connection-oriented communication 151
Contention processing schemes 85
Contention resolution 233
Customer perception 59
Cut-through switching 293

Deflection routing 233
Dependability 17
Discrete-time 193
Distributed databases 105

Efficient computation 41
Erlang formula 41
Exhaustive service discipline 267

Fixed point approximation 233
Fourier-series method 267

General modelling tool framework 17
General service order sequence 173
Generating functions 193, 267

Hot-potato routing 233
Hypercube 151

Independent routing 193
Interconnection network 293
B-ISDN 59

Loss systems 41

Manufacturing system design 211
Markov reward models 17
Mean waiting time 173
Multiple classes 131

Nonexhaustive service discipline 173
Nonuniform traffic 247
Numerical transform inversion 267

Optical communication 85

Packet switching 233
Performability 17
Performance 17, 105
Performance analysis 85, 193, 293
Polling models 267
Pseudoconservation law 173

Queueing networks 17, 211
Queueing 105, 193

Regular networks 233
Reordering 105
Resource sharing 41

Serial production lines 211
Shared resource 131
Stochastic Petri nets 17
Switch performance 247
Switching 193

Tail probabilities 267
Throughput maximization 211
Timestamp 105
Time congestion 41
Traffic control and management 247
Transient analysis 267

Unbalancing workload 211
Uniform asymptotic approximation 131

Wavelength division multiplexing networks 85
Workload allocation 211
